

Enabling a data-informed public sector:

From hype to action using
the Big Data Test Infrastructure (BDTI)

The BDTI is a **ready-to-use** and **free*** **analytics cloud platform**, based on **open source** tools, which aims to help European public administrations to **experiment with data** and **derive insights** to support them in their decision-making.

The BDTI has already helped public sector entities to:

- ▶ **Derive insights** about mobility to redesign services in Italy
- ▶ **Support** clinicians by extracting knowledge from articles in Spain
- ▶ **Help** the European Blood Alliance to investigate therapy efficiency for COVID-19

If you are a **public sector entity** looking for a data playground,
your organisation could be next!

Contact us and apply for BDTI :
